Summary

I'm a backend developer based in Dhaka with just over two years of professional experience. My day-to-day work revolves around Python and Django — building APIs, working out database structures, and making sure things actually run well in production. I've had the chance to tackle some genuinely interesting problems: setting up async task pipelines that stopped APIs from choking under load, building real-time notification systems from scratch, and shipping services that are still live and handling real users today.

I started as a junior developer, which meant a lot of learning on the job — reading other people's code, breaking things, fixing them, and gradually getting faster at all of it. I enjoy that process. I like understanding *why* something works, not just that it does.

Technical Skills

Languages & Frameworks: Python, Django, Django REST Framework, Django Channels

AI / ML: OpenAI API (GPT-4o, Vision, Embeddings), Google Gemini, ChromaDB, RAG Pipelines, PDFPlumber

Databases & Async: PostgreSQL, Redis, Celery, WebSockets, Daphne ASGI

Authentication & Security: JWT (SimpleJWT), Token Blacklisting, OTP Verification, RBAC, Rate Limiting

DevOps & Deployment: Docker, Docker Compose, NGINX, Gunicorn, AWS, Google Cloud Storage, Linux, Git

Work Experience

Backend Developer

Jul 2023 – Present

Join Venture AI

Dhaka, Bangladesh

- Lead backend developer on multiple AI-powered production platforms. Own end-to-end feature delivery from requirements to deployment, making architectural decisions that impact system scalability and reliability.
- Integrated OpenAI APIs (GPT-4o, Vision, Embeddings) into production workflows with robust error handling, structured output parsing, and fallback mechanisms to handle API failures gracefully.
- Engineered asynchronous task pipelines using Celery and Redis for background processing, reducing API response times and improving user experience during heavy compute operations.
- Built real-time systems using Django Channels and WebSockets, implementing connection lifecycle management and reliable message delivery for live notifications and status updates.
- Managed deployment infrastructure across Docker, AWS, NGINX, and Gunicorn. Implemented JWT-based authentication with token blacklisting, RBAC, and centralized logging for security and observability.

Junior Backend Developer

Apr 2024 – Apr 2025

Tiger Park Limited

Dhaka, Bangladesh

- Developed production REST APIs using Django REST Framework for iOS and Android applications, ensuring API contracts meet mobile development requirements.
- Designed optimized PostgreSQL schemas applying normalization principles, strategic indexing, and query optimization to support high-volume data operations.
- Debugged and resolved production issues through systematic log analysis, database query tracing, and API monitoring, reducing incident resolution time.

Projects

Camper Closet — AI-Powered Wardrobe & Trip Packing Platform

[GitHub](#)

Django, DRF, OpenAI GPT-4o Vision, Celery, Redis, PostgreSQL, Docker, Google Cloud Storage

- Architected a full-stack SaaS platform enabling users to digitize wardrobes and intelligently plan trip packing. Designed and built 100+ REST API endpoints supporting end-to-end user workflows.
- Integrated OpenAI Vision API to automatically extract clothing attributes (brand, color, material, quantity) from photos, eliminating manual data entry and accelerating wardrobe digitization.
- Developed intelligent trip planning engine with deadline tracking, automated packing list generation, and email notifications to keep users informed and on schedule.

- Implemented multi-tenant PostgreSQL schema supporting parent/child roles, relational clothing tracking, and concurrent trip management for a seamless user experience.
- Built asynchronous task pipelines using Celery and Redis for background notifications and scheduled jobs. Secured system with JWT authentication, RBAC, OTP verification, and Docker deployment.

Pearii — Perimenopause Health & Wellness Platform

[GitHub](#)

Django, DRF, OpenAI GPT-4o, ChromaDB, PostgreSQL, Redis, Docker, NGINX, Gunicorn

- Engineered a RAG-powered AI health assistant combining OpenAI GPT-4o with ChromaDB vector storage, enabling evidence-based health guidance that minimizes hallucination through semantic retrieval.
- Built custom medical document ingestion pipelines using PDFPlumber, automatically indexing and retrieving relevant health information for contextual AI responses.
- Designed and implemented a comprehensive health tracking system supporting multi-dimensional symptom monitoring, fitness goals, and user wellness intents with optimized query patterns.
- Created unified API response and exception handling framework across 40+ endpoints, ensuring 100% consistency and reducing frontend integration complexity.
- Implemented granular workout tracking (Week → Day → Exercise) with automated metadata extraction, including dynamic video duration calculation for uploaded fitness content.
- Added multilingual support, Redis caching, OTP-based authentication, and production deployment using Docker Compose, NGINX, and Gunicorn.

StudyBuddy — AI-Powered Collaborative Learning Platform

[GitHub](#)

Django, DRF, Django Channels, WebSockets, Google Gemini API, PostgreSQL, Redis, Docker

- Built real-time multiplayer study games using Django Channels and WebSockets with sub-second leaderboard synchronization, enabling competitive learning experiences for students.
- Integrated Google Gemini API to power AI-generated quizzes, flashcards, summaries, and intelligent tutoring workflows, reducing content creation overhead for educators.
- Engineered asynchronous task processing with Celery and Redis for high-throughput AI content generation, enabling instant quiz generation without blocking user requests.
- Designed microservices architecture supporting concurrent real-time sessions with efficient WebSocket event handling and optimized Redis message broker configuration.
- Implemented JWT-based authentication with granular role-based access control (students, teachers, admins), enabling secure multi-user collaboration at scale.

Education

BSc in Computer Science

Bangladesh University of Business and Technology (BUBT)

Graduating 2026

Dhaka, Bangladesh

Diploma in Computer Engineering

Pabna Polytechnic Institute

Pabna, Bangladesh

A Few More Things

I work well in English — I’m comfortable reading documentation, writing technical specs, and communicating in international team environments. I’ve been doing this professionally, not just academically.

I’m the kind of developer who gets curious when something breaks unexpectedly. I keep notes on things I’ve debugged, patterns I’ve noticed, and things that didn’t work the way I assumed they would. I think that habit has made me a better programmer over time.

I’m open to both remote and in-office roles, and I’m genuinely interested in working on products that have real users.
